EXPERIENCE

Amazon · Pittsburgh, PA

Software Engineer II Mar 2026 – Present

- Cut p99 latency for promotion eligibility checks at checkout by 65% for carts with 50+ line items. Designed a map-reduce approach to evaluate promotions in parallel and led a four-person team through implementation.
- Built a multi-agent AI workflow for an API migration targeting 200+ clients across two legacy services. Agents analyze client code, plan and implement upgrades, and review changes for compatibility. The two pilot upgrades each took one day against a manual estimate of two weeks per client.
- Led the migration of two core promotions services between AWS Regions with zero downtime and zero migration-related tickets. Routed writes to the designated authoritative region so processes could run across regions. Fixed 12 availability and performance issues during the migration.

Software Engineer I Apr 2025 – Mar 2026

- Led the migration of 7+ asynchronous workloads from a shared service fleet to independently scaling AWS Lambda functions, shrinking the fleet and lowering annual infrastructure costs. The change avoided more than 10 on-call pages per year.
- Developed the migration pattern and reusable Dagger library that the team continues to use for additional Lambda migrations.

Amazon Web Services · Sunnyvale, CA

Software Development Engineer Jun 2024 – Apr 2025

- Designed a global service to monitor remotely triggered black hole routing for AWS DDoS protection. Led implementation with one other engineer. The service detected eight misconfigurations by April 2025.
- Rearchitected the internet monitoring probe service to run in AWS Local Zones and helped a partner team redesign its service to meet the same Local Zones security requirements. Conducted security reviews for both services.

Amazon Web Services · Boston, MA

Software Development Engineer Intern Jun 2023 – Aug 2023

- Built a full-stack content authoring application prototype for Amazon Connect Wisdom using TypeScript, React, and Kotlin. Tested frontend and backend code, achieving over 99.5% coverage for the feature.

TECHNICAL SKILLS

Languages	Go, Java, Kotlin, Python, TypeScript, SQL
AWS	Cloud-native workflow design and workload migration
Frameworks and tools	Dagger, Spring Boot, Docker, React

EDUCATION

University of Pittsburgh Aug 2020 – Dec 2023

B.S. in Computer Science, minor in Applied Statistics · Summa cum laude with departmental honors
GPA 3.87/4.00
